

Claims

What is claimed is:

1. A fan with a guiding rib in a vent, comprising:

a frame body having a hole;

a supporting part composed of a pivot and guiding ribs with outside extension, wherein said pivot connects a fan blade, by means of said guiding ribs, said supporting part is disposed on the inner end surface of said hole, the profile of said guiding rib is to have an inclined plane that gradually shrink from the end surface to said fan blade.

2. The fan with a guiding rib in a vent of claim 1, wherein said guiding ribs are in a curved shape in response to a direction of air flow blown from said fan blade.
